The MPC-11 monoclonal antibody is ideal for use as a non-reactive isotype-matched control for mouse IgG2b antibodies in most *in vivo* and *in vitro* applications.

**Shelf-life and Storage**

Store at the stock concentration at 4°C. **Do not freeze.**  
 All Bio X Cell antibodies have a guaranteed shelf-life of one year from the date of customer receipt when stored as recommended. It is not uncommon for a floccule or precipitate to appear during storage. The floccule is typically buffer salts precipitating out of solution or a small bit of protein aggregation. For information on how to remove floccules or precipitates see our FAQ's at [bxcell.com/faqs](https://bxcell.com/faqs).

**Protocol Information**

Since applications vary, each investigator should use the application references as a guide to help estimate the appropriate dose or concentration. The dose or concentration can be further optimized experimentally in a dose response or titration experiment.
