Technical Data Sheet

InVivoMAb anti-rat CD80 (B7-1)

Lot Specific Information

Lot Number:Lot Specific*Volume:Lot Specific*

Concentration: Lot Specific* (generally 4 to 11 mg/ml) *

Total Protein: Lot Specific*

*This information will be noted on the certificate of analysis that ships with this product.

Product Information

 Catalog Number:
 BE0187

 Clone:
 3H5

 Isotype:
 Mouse IgG1, κ

Recommended Isotype Control(s): InVivoMAb mouse IgG1 isotype control, unknown specificity

Recommended Dilution Buffer: InVivoPure pH 7.0 Dilution Buffer

Immunogen: HTLV-1-transformed Lewis-S1 rat T cell line

Reported Applications: in vitro CD80 blockade

Flow cytometry PBS, pH 7.0

Formulation: Contains no stabilizers or preservatives

Endotoxin: <2EU/mg (<0.002EU/µg)

Determined by LAL gel clotting assay

Purity: >95%
Determined by SDS-PAGE

Sterility: 0.2 µM filtered

Production: Purified from tissue culture supernatant in an animal free facility

Purification:Protein GRRID:AB_10949011Molecular Weight:150 kDa

Description

The 3H5 monoclonal antibody reacts with rat CD80 also known as B7-1. CD80 is a 60 kDa Ig superfamily member and is expressed by activated B cells and constitutively by monocytes and dendritic cells. This ligand binds to CD28 to provide a costimulatory signal necessary for T cell activation and survival, and cytokine production. Additionally, CD80 binds to CTLA-4 which inhibits T cells. The 3H5 antibody has been shown to block CD80-mediated co-stimulation of rat T cells in

Shelf-life and Storage

Store at the stock concentration at 4°C. **Do not freeze.**

All Bio X Cell antibodies have a guaranteed shelf-life of one year from the date of customer receipt when stored as recommended. It is not uncommon for a floccule or precipitate to appear during storage. The floccule is typically buffer salts precipitating out of solution or a small bit of protein aggregation. For information on how to remove floccules or precipitates see our FAQ's at bxcell.com/faqs.

Protocol Information

Since applications vary, each investigator should use the application references as a guide to help estimate the appropriate dose or concentration. The dose or concentration can be further optimized experimentally in a dose response or titration experiment.
