

InVivoMAb anti-mouse TIM-1 (CD365)

Lot Specific Information

Lot Number:	Lot Specific*
Volume:	Lot Specific*
Concentration:	Lot Specific* (generally 4 to 11 mg/ml) *
Total Protein:	Lot Specific*

*This information will be noted on the certificate of analysis that ships with this product.

Product Information

Catalog Number:	BE0289
Clone:	3B3
Isotype:	Rat IgG2a, κ
Recommended Isotype Control(s):	InVivoMAb rat IgG2a isotype control, anti-trinitrophenol
Recommended Dilution Buffer:	InVivoPure pH 7.0 Dilution Buffer
Immunogen:	Mouse TIM-1 (signal and IgV domains)/mouse IgG2a Fc fusion protein <i>in vivo</i> TIM-1 activation <i>in vitro</i> T cell stimulation/activation Functional assays ELISA Flow cytometry
Reported Applications:	PBS, pH 7.0 Contains no stabilizers or preservatives
Formulation:	<2EU/mg (<0.002EU/ μ g) Determined by LAL gel clotting assay
Endotoxin:	>95% Determined by SDS-PAGE
Purity:	0.2 μ m filtered
Sterility:	Purified from tissue culture supernatant in an animal free facility
Production:	Protein G
Purification:	AB_2687812
RRID:	150 kDa
Molecular Weight:	

Description

The 3B3 monoclonal antibody reacts with mouse T cell immunoglobulin and mucin domain 1 (TIM-1) also known as CD365. TIM-1 is a type I cell-surface glycoprotein and member of the Ig superfamily. TIM-1 is preferentially expressed on TH2 cells and has been identified as a stimulatory molecule for T cell activation. The TIM gene family, plays critical roles in regulating the immune response to viral infection. TIM-1 is also involved in allergic responses, asthma, and transplant tolerance. The 3B3 antibody is an agonistic antibody and has been shown to activate TIM-1 *in vivo* and *in vitro* resulting in the hyperproliferation of T cells and induction of proinflammatory cytokine production.

Shelf-life and Storage

Store at the stock concentration at 4°C. **Do not freeze.**
All Bio X Cell antibodies have a guaranteed shelf-life of one year from the date of customer receipt when stored as recommended. It is not uncommon for a floccule or precipitate to appear during storage. The floccule is typically buffer salts precipitating out of solution or a small bit of protein aggregation. For information on how to remove floccules or precipitates see our FAQ's at bxcell.com/faqs.

Protocol Information

Since applications vary, each investigator should use the application references as a guide to help estimate the appropriate dose or concentration. The dose or concentration can be further optimized experimentally in a dose response or titration experiment.
