# InVivoMAb anti-mouse TIM-1 (CD365)

# **Lot Specific Information**

-	
Lot Number:	Lot Specific*
Volume:	Lot Specific*
Concentration:	Lot Specific* (generally 4 to 11 mg/ml) *
Total Protein:	Lot Specific*
*This information will be noted on the certificate of analysis that ships with this product.	

#### **Product Information**

Catalog Number:	BE0314
Clone:	3D10
Isotype:	Rat IgG1, к
Recommended Isotype Control(s):	InVivoMAb rat IgG1 isotype control, anti-horseradish peroxidase
Recommended Dilution Buffer:	InVivoPure pH 7.0 Dilution Buffer
Immunogen:	Mouse TIM-1 (signal and IgV domains)/mouse IgG2a Fc fusion protein
Reported Applications:	in vivo TIM-1 blockade in vitro TIM-1 blockade
Formulation:	PBS, pH 7.0 Contains no stabilizers or preservatives
Endotoxin:	<2EU/mg (<0.002EU/µg) Determined by LAL gel clotting assay
Purity:	>95% Determined by SDS-PAGE
Sterility:	0.2 µM filtered
Production:	Purified from tissue culture supernatant in an animal free facility
Purification:	Protein G
RRID:	AB_2754552
Molecular Weight:	150 kDa

### Description

The 3D10 monoclonal antibody reacts with mouse T cell immunoglobulin and mucin domain 1 (TIM-1) also known as CD365. TIM-1 is a type I cell-surface glycoprotein and member of the Ig superfamily. TIM-1 is preferentially expressed on TH2 cells and has been identified as a stimulatory molecule for T cell activation. The TIM gene family, plays critical roles in regulating the immune response to viral infection. TIM-1 is also involved in allergic responses, asthma, and transplant tolerance. The 3D10 antibody has been shown to block TIM-1 *in vivo* and enhance atherosclerosis in mice studies.

#### Shelf-life and Storage

#### Store at the stock concentration at 4°C. Do not freeze.

All Bio X Cell antibodies have a guaranteed shelf-life of one year from the date of customer receipt when stored as recommended. It is not uncommon for a floccule or precipitate to appear during storage. The floccule is typically buffer salts precipitating out of solution or a small bit of protein aggregation. For information on how to remove floccules or precipitates see our FAQ's at <u>bxcell.com/faqs</u>.

#### **Protocol Information**

Since applications vary, each investigator should use the application references as a guide to help estimate the appropriate dose or concentration. The dose or concentration can be further optimized experimentally in a dose response or titration experiment.
