

Technical Data Sheet

InVivoMAb anti-mouse CD69

Attention: Use of this product constitutes an agreement to Bio X Cell's Terms and Conditions which are included with this product in print and can also be found at <https://bioxcell.com/terms-and-conditions>.

Lot Specific Information

Lot Number: Lot Specific*
Volume: Lot Specific*
Concentration: Lot Specific* (generally 4 to 11 mg/ml) *
Total Protein: Lot Specific*

*This information will be noted on the certificate of analysis that ships with this product.

Product Information

Catalog Number: BE0330
Clone: CD69.2.2
Isotype: Mouse IgG1, κ
Recommended Isotype Control(s): InVivoMAb mouse IgG1 isotype control, unknown specificity
Recommended Dilution Buffer: InVivoPure pH 7.0 Dilution Buffer
Immunogen: CD69+ murine 300-19 pre-B cells
Reported Applications: *in vivo* down-regulation of CD69 expression
Functional assays
Formulation: PBS, pH 7.0
Contains no stabilizers or preservatives
Endotoxin: <2EU/mg (<0.002EU/ μ g)
Determined by LAL gel clotting assay
Purity: >95%
Determined by SDS-PAGE
Sterility: 0.2 μ m filtration
Production: Purified from cell culture supernatant in an animal-free facility
Purification: Protein A
RRID: [AB_2894750](https://abnova.com/AB_2894750)
Molecular Weight: 150 kDa

Description

The CD69.2.2 monoclonal antibody reacts with mouse CD69, an 85 kDa type II C-type lectin. CD69 expression is rapidly induced upon cell activation in all leukocytes. CD69 is thought to be a negative regulator of the immune response in part through modulating the production of TGF- β . Studies in CD69-deficient mice have revealed that CD69 plays crucial roles in the pathogenesis of various inflammatory diseases including arthritis, asthma, and colitis. When administered *in vivo* the CD69.2.2 antibody causes CD69 to be internalized but does not deplete CD69+ cells. Anti-CD69-treated mice resemble CD69^{-/-} mice to a remarkable degree. The CD69.2.2 antibody has been shown to activate NK cells *in vivo* and *in vitro* and promote anti-tumor responses.

Storage

Store at the stock concentration at 4°C. **Do not freeze.**

It is not uncommon for a floccule or precipitate to appear during storage. The floccule is typically buffer salts precipitating out of solution or a small bit of protein aggregation. For information on how to remove floccules or precipitates see our FAQ's at <https://bioxcell.com/faqs>.

Protocol Information

Since applications vary, each investigator should use the application references as a guide to help estimate the appropriate dose or concentration. The dose or concentration can be further optimized experimentally in a dose response or titration experiment.
