Technical Data Sheet

InVivoMAb anti-rat/mouse CD71 (TfR1)

Lot Specific Information

Lot Number:Lot Specific*Volume:Lot Specific*

Concentration: Lot Specific* (generally 4 to 11 mg/ml) *

Total Protein: Lot Specific*

*This information will be noted on the certificate of analysis that ships with this product.

Product Information

Reported Applications:

Catalog Number: BE0331
Clone: OX-26

Isotype: Mouse IgG2a, κ

Recommended Isotype Control(s): InVivoMAb mouse IgG2a isotype control, unknown specificity

Recommended Dilution Buffer: InVivoPure pH 7.0 Dilution Buffer

Immunogen: PHA-activated PVG rat lymph node cells

Targeted drug delivery to the brain Immunohistochemistry (frozen)

Flow cytometry

Formulation: PBS, pH 7.0

Contains no stabilizers or preservatives

Endotoxin: <2ΕU/mg (<0.002ΕU/μg)

Determined by LAL gel clotting assay

Purity: Determined by SDS-PAGE

Sterility: 0.2 µM filtered

Production:

Purified from tissue culture supernatant in an animal free facility

Purification: Protein A

PRID.

Molecular Weight:

Description

The OX-26 monoclonal antibody reacts with rat CD71 also known as transferrin receptor protein 1 (TfR1). The antibody is reported to cross-react with mouse CD71 as well. CD71 is a 170-180 kDa type II homodimeric transmembrane glycoprotein which is expressed on the surface of proliferating cells, reticulocytes, and erythroid precursors. CD71 plays a role in the control of cellular proliferation and is required for iron import from transferrin into cells by endocytosis. CD71 is expressed on malignant cells at high levels and its expression correlates with cancer progression. This high expression on malignant cells along with CD71's ability to internalize and the necessity of iron for cancer cell proliferation makes the transferrin receptor an attractive target to exploit for the delivery of drugs into malignant cells. Upon binding to an extracellular domain of CD71, OX-26 is transferred into the blood-brain barrier (BBB) via the endogenous transferrin transport system. Under this mechanism, the OX-26 antibody is often used to transport conjugated drugs across the BBB in experimental rat models.

150 kDa

Shelf-life and Storage

Store at the stock concentration at 4°C. Do not freeze.

All Bio X Cell antibodies have a guaranteed shelf-life of one year from the date of customer receipt when stored as recommended. It is not uncommon for a floccule or precipitate to appear during storage. The floccule is typically buffer salts precipitating out of solution or a small bit of protein aggregation. For information on how to remove floccules or precipitates see our FAQ's at bxcell.com/fags.

Protocol Information

Since applications vary, each investigator should use the application references as a guide to help estimate the appropriate dose or concentration. The dose or concentration can be further optimized experimentally in a dose response or titration experiment.
