Technical Data Sheet

InVivoMAb anti-human CD220 (Insulin Receptor)

Attention: Use of this product constitutes an agreement to Bio X Cell's Terms and Conditions which are included with this product in print and can also be found at https://bioxcell.com/terms-and-conditions.

Lot Specific Information

Lot Number: **Lot Specific***
Volume: **Lot Specific***
Concentration: **Lot Specific* (generally 4 to 11 mg/ml) ***
Total Protein: **Lot Specific***

*This information will be noted on the certificate of analysis that ships with this product.

Product Information

Catalog Number:	**BE0338**
Clone:	**IR 83-22**
Isotype:	Mouse IgG1
Recommended Isotype Control(s):	InVivoMAb mouse IgG1 isotype control, unknown specificity
Recommended Dilution Buffer:	InVivoPure pH 7.0 Dilution Buffer
Immunogen:	Human IM-9 lymphocytes
Reported Applications:	Western blot
Formulation:	PBS, pH 7.0 Contains no stabilizers or preservatives
Endotoxin:	<2EU/mg (<0.002EU/µg) Determined by LAL gel clotting assay
Purity:	>95% Determined by SDS-PAGE
Sterility:	0.2 µm filtration
Production:	Purified from cell culture supernatant in an animal-free facility
Purification:	Protein G
RRID:	AB_2894758
Molecular Weight:	150 kDa

Description

The IR 83-22 monoclonal antibody reacts with human CD220, also known as insulin receptor. CD220 is a type I transmembrane receptor tyrosine kinase which, upon binding to insulin, initiates several cellular effects, including glucose uptake, cell growth, differentiation, and apoptosis. These effects primarily occur in skeletal muscle, fat, and the liver. Neuronal CD220 signaling has been shown to have an important role in energy homeostasis, reproduction, and the development of neurodegenerative diseases. The IR 83-22 antibody has been shown to inhibit approximately 80% of insulin binding to IM-9 insulin receptor expressing cells.

Storage

Store at the stock concentration at 4°C. **Do not freeze.**
It is not uncommon for a floccule or precipitate to appear during storage. The floccule is typically buffer salts precipitating out of solution or a small bit of protein aggregation. For information on how to remove floccules or precipitates see our FAQ's at https://bioxcell.com/faqs.

Protocol Information

Since applications vary, each investigator should use the application references as a guide to help estimate the appropriate dose or concentration. The dose or concentration can be further optimized experimentally in a dose response or titration

experiment.
