### Description

The F31-5G3 monoclonal antibody reacts with mouse T cell immunoglobulin and mucin domain 4 (TIM-4) a phosphatidylserine-binding receptor and member of the Ig superfamily. TIM-4 is preferentially expressed on antigen-presenting cells. TIM-4 is thought to enhance the engulfment of apoptotic cells and play a role in regulating T cell proliferation.

### Storage

Store at the stock concentration at 4°C. **Do not freeze.**

It is not uncommon for a floccule or precipitate to appear during storage. The floccule is typically buffer salts precipitating out of solution or a small bit of protein aggregation. For information on how to remove floccules or precipitates see our FAQ's at <https://bioxcell.com/faqs>.

### Protocol Information

Since applications vary, each investigator should use the application references as a guide to help estimate the appropriate dose or concentration. The dose or concentration can be further optimized experimentally in a dose response or titration experiment.
