

Technical Data Sheet

InVivoMAb anti-mouse RGMb

Attention: Use of this product constitutes an agreement to Bio X Cell's Terms and Conditions which are included with this product in print and can also be found at <https://bioxcell.com/terms-and-conditions>.

Lot Specific Information

Lot Number: Lot Specific*
Volume: Lot Specific*
Concentration: Lot Specific* (generally 4 to 11 mg/ml) *
Total Protein: Lot Specific*

*This information will be noted on the certificate of analysis that ships with this product.

Product Information

Catalog Number: BE0400
Clone: 307.9D1
Isotype: Rat IgG2a, κ
Recommended Isotype Control(s): InVivoMAb rat IgG2a isotype control, anti-trinitrophenol
Recommended Dilution Buffer: InVivoPure pH 6.0T Dilution Buffer
Immunogen: Recombinant murine RGMb
Reported Applications: *in vivo* RGMb blockade
ELISA
Flow cytometry
Formulation: PBS, pH 6.0
Contains no stabilizers or preservatives
Endotoxin: <2EU/mg (<0.002EU/ μ g)
Determined by LAL gel clotting assay
Purity: >95%
Determined by SDS-PAGE
Sterility: 0.2 μ m filtered
Production: Purified from cell culture supernatant in an animal-free facility
Purification: Protein G
Molecular Weight: 150 kDa

Description

The 307.9D1 monoclonal antibody reacts with mouse Repulsive Guidance Molecule b (RGMb), a member of the RGM family which consists of RGMa, RGMb, and RGMc/hemojuvelin. RGMs are GPI-anchored membrane proteins that bind bone morphogenetic proteins (BMPs) and neogenin. BMPs have diverse roles in many processes, including cell proliferation, differentiation, and apoptosis. RGMb has a well-elucidated role in neural development, with RGMb knock-out mice dying 2-3 weeks after birth. RGMb is also expressed by macrophages and can regulate IL-6 expression. Recently, it has been shown that PD-L2 also binds to RGMb and that blocking the RGMb-PD-L2 interaction impairs the development of respiratory tolerance but blocking the PD-1-PD-L2 interaction does not. The 307.9D1 antibody has been shown to block the binding of RGMb to PD-L2 and BMP-2/4.

Storage

Store at the stock concentration at 4°C. **Do not freeze.**

It is not uncommon for a floccule or precipitate to appear during storage. The floccule is typically buffer salts precipitating out of solution or a small bit of protein aggregation. For information on how to remove floccules or precipitates see our FAQ's at <https://bioxcell.com/faqs>.

Protocol Information

Since applications vary, each investigator should use the application references as a guide to help estimate the appropriate dose or concentration. The dose or concentration can be further optimized experimentally in a dose response or titration experiment.
