

# Technical Data Sheet

## InVivoPure pH 6.0T Dilution Buffer

**Attention:** Use of this product constitutes an agreement to Bio X Cell's Terms and Conditions which are included with this product in print and can also be found at <https://bioxcell.com/terms-and-conditions>.

### Lot Specific Information

Lot Number: Lot Specific\*

Volume: 50 ml

Concentration: 1x

\*This information will be noted on the certificate of analysis that ships with this product.

### Product Information

Catalog Number: IPT060

Endotoxin: <0.5 EU/mL (<0.0005EU/μL)  
Endotoxin level is determined using an LAL gel clotting test

Sterility: 0.2 μM filtered

Composition: 5 mM Na<sub>2</sub>HPO<sub>4</sub> 27 mM NaH<sub>2</sub>PO<sub>4</sub> 136 mM NaCl 0.01% TWEEN® 80

This buffer does not contain calcium, magnesium, phenol red, or preservatives such as azide.

Keep contents sterile. Open only in a biological safety cabinet.

### Murine Pathogen Test Results

Mouse Norovirus: Negative, Mouse Parvovirus: Negative, Mouse Minute Virus: Negative, Mouse Hepatitis Virus: Negative, Reovirus Screen: Negative, Lymphocytic Choriomeningitis virus: Negative, Lactate Dehydrogenase-Elevating Virus: Negative, Mouse Rotavirus: Negative, Theiler's Murine Encephalomyelitis: Negative, Ectromelia/Mousepox Virus: Negative, Hantavirus: Negative, Polyoma Virus: Negative, Mouse Adenovirus: Negative, Sendai Virus: Negative, Mycoplasma Pulmonis: Negative, Pneumonia Virus of Mice: Negative, Mouse Cytomegalovirus: Negative, K Virus: Negative

### Toxicity Test Results

Nontoxic and nonantigenic in animal models

### Description

InVivoPure™ dilution buffers are specifically formulated and tested to satisfy the stringent requirements for in vivo applications. They are extremely low in endotoxin, have been screened for murine pathogens, tested in animal models for toxicity and are formulated with respect to buffer composition and pH to satisfy the requirements of Bio X Cell's antibodies.

### Storage

Store at the stock concentration at 4°C. **Do not freeze.**

It is not uncommon for a floccule or precipitate to appear during storage. The floccule is typically buffer salts precipitating out of solution or a small bit of protein aggregation. For information on how to remove floccules or precipitates see our FAQ's at <https://bioxcell.com/faqs>.

### Protocol Information

Since applications vary, each investigator should use the application references as a guide to help estimate the appropriate dose or concentration. The dose or concentration can be further optimized experimentally in a dose response or titration experiment.
