

Advancing Immunology Research with Confidence

High-quality *in vivo* antibodies backed by
peer-reviewed publications and responsive support

Advancing Immunology Research with Confidence

High-quality *in vivo* antibodies backed by peer-reviewed publications and responsive support

Immunology research is foundational for uncovering disease mechanisms, developing new therapies, and improving patient outcomes. However, progress is often slowed by inconsistent antibody performance, incomplete documentation, and supply disruptions that compromise experimental reproducibility.

Bio X Cell empowers immunology researchers by providing *in vivo*-validated antibodies with consistent performance, detailed and transparent documentation, and a reliable global supply. As your trusted partner in high-stakes preclinical studies, Bio X Cell delivers the reproducibility and confidence you need to advance your therapeutic programs efficiently.

Why Choose Bio X Cell?

Cited in Nearly 30,000 Publications. Trusted Worldwide.

Global leader in citations of antibodies for *in vivo* use

Flexible starting points—customer-provided cells or sequence, or a Bio X Cell antibody

Scalable production from milligrams to grams

Custom services for catalog modifications or your own antibodies

Exceptional quality & purity

- Formulated for *in vivo* use
- Unmatched lot-to-lot consistency
- ≤1EU/mg endotoxin level
- ≥95% Purity
- No added carriers or preservatives

PhD-level technical support

In vivo-ready, rigorously tested, with lot-specific certificates of analysis available on demand

Antibodies available globally with rapid shipping

Products

Product Categories for Cancer Biology Applications

InVivoMAb™ Antibodies

Monoclonal antibodies ideal for *in vivo* immune modulation and depletion studies

InVivoPlus™ Antibodies

Enhanced QC version of InVivoMAb™, meeting additional publication and compliance needs

RecombiMAb™ Antibodies

Recombinant monoclonals designed for high consistency and long-term reproducibility

InVivoSIM™ Biosimilars

Research-grade biosimilars that model therapeutic antibodies in preclinical settings

Conjugated Antibodies

Fluorophore-, biotin-, or enzyme-conjugated antibodies for downstream detection

Isotype Controls

Matched controls optimized for *in vivo* research

ReadyTag™ Antibodies

Anti-tag antibodies useful for detecting tagged proteins

Fusion Proteins

Functional receptor fusion proteins for immune signaling studies

Products

Featured Products

With a growing catalog of over 700+ antibodies, Bio X Cell offers rapid global shipping which ensures access to critical reagents won't delay your next functional study.

Antigen	Reactivities Available	Citations	Research Applications
CD3ε	Mouse	300+	T cell activation/depletion
CD4*	Human, Mouse, Rat	900+	Helper T cell depletion
CD8α*	Human, Mouse, Rat	1,100+	Cytotoxic T cell depletion
CD19†	Human, Mouse	30+	B cell depletion and phenotyping
Gr-1/Ly6C*	Mouse	200+	Neutrophil depletion
PD-1**	Human, Mouse, Monkey	2,300+	Immune checkpoint blockade
CTLA-4*	Human, Mouse, Rat	500+	Immune modulation
CD25†	Human, Mouse, Rat	100+	Regulatory T cell depletion
IFN-γ†	Human, Mouse	400+	Cytokine analysis and functional studies

* Recombinant Format Available
† Biosimilar Format Available

Applications

Antibodies Tailored for Immune System Research

Bio X Cell antibodies support diverse immunology applications, including:

- Immune cell depletion and subset analysis
 - Cytokine neutralization and detection
 - Immune checkpoint blockade
 - Antigen receptor signaling
- Autoimmune and inflammatory disease models
 - Graft-versus-host disease (GVHD) studies
 - Vaccine and infectious disease research
 - Preclinical modeling of immunotherapies

Custom Services

Formulation and Conjugation Services for Immunology Research

When off-the-shelf options don't meet your needs, Bio X Cell offers tailored services to support custom immunology workflows:

Custom Formulations
Adjust buffers or concentrations to fit unique *in vivo* protocols

Custom Conjugation
Add fluorophores, biotin, or enzymes for multiplexed detection

Fragment Production
Fragments that reduce antibody size for more precise, less invasive, and more effective probing or targeting of neural pathways and disease processes

Bulk Scaling
Flexible production volumes from micrograms to kilograms
